

Your Diabetic Eye Screening Programme

We tested your eyes using **Minims Tropicamide 1.0%** eye drops.

It's extremely rare, but you may experience a reaction to these drops. If you, or the person you're caring for have any of the outlined symptoms overleaf, contact your local A&E department and keep hold of this leaflet.

Service provided by

NEC NEC Care

Severe eye pain

Nausea and vomiting

Severe headache

Blurred vision and seeing halos around lights

Profuse eye watering

The eye drops we have administered can affect your vision, in different ways, for up to 6 hours. We strongly advise that you do not drive or operate heavy machinery during this time. Your vehicle insurance could be invalidated if you drive whilst your pupils are dilated.

Help us improve

If you have any feedback about your service today, please let us know via our online survey.
